Implement improvements (November 2025):

- Improved C4FM reception characteristics.
- Fixed an issue where it was not possible to stop message transmission by keying during the interval when repeatedly sending CW messages in Beacon Mode.
- Fixed an issue where the scope display would invert UPPER/LOWER when transmitting SSB on VHF.
- Fixed an issue where the CW indicator would stop illuminating.
- Improved operational stability in C4FM and APRS modes.
- Optimized the antenna tuning operation of the SPA-1.
- Minor fixes to OPERATION SETTING.
- Other minor fixes.

Note: After completely installing the firmware, the FTX-1 must be reset.

Refer to the FTX-1 series Operating Manual Page 79.

Or refer to the Firmware_Ver_Up_Manual_ENG_FTX-1_2506-B.

Reset the transceiver

1. Turn the transceiver OFF.
2. While pressing the **[BACK]** and **[FINE/FAST]** keys simultaneously, then turn the transceiver **ON**.
 - The frequency display will return to "144.000.000" (SUB-side), "7.000.000" (MAIN-side).

This completes the firmware upgrading process.

If you already have the above firmware versions, it is not necessary to update the FTX-1 again.

We hope this new firmware will increase your enjoyment of your FTX-1. Thank you for choosing Yaesu radios. If you have any problems or questions, please contact Yaesu Amateur Tech Support amateurtech@yaesu.com.
